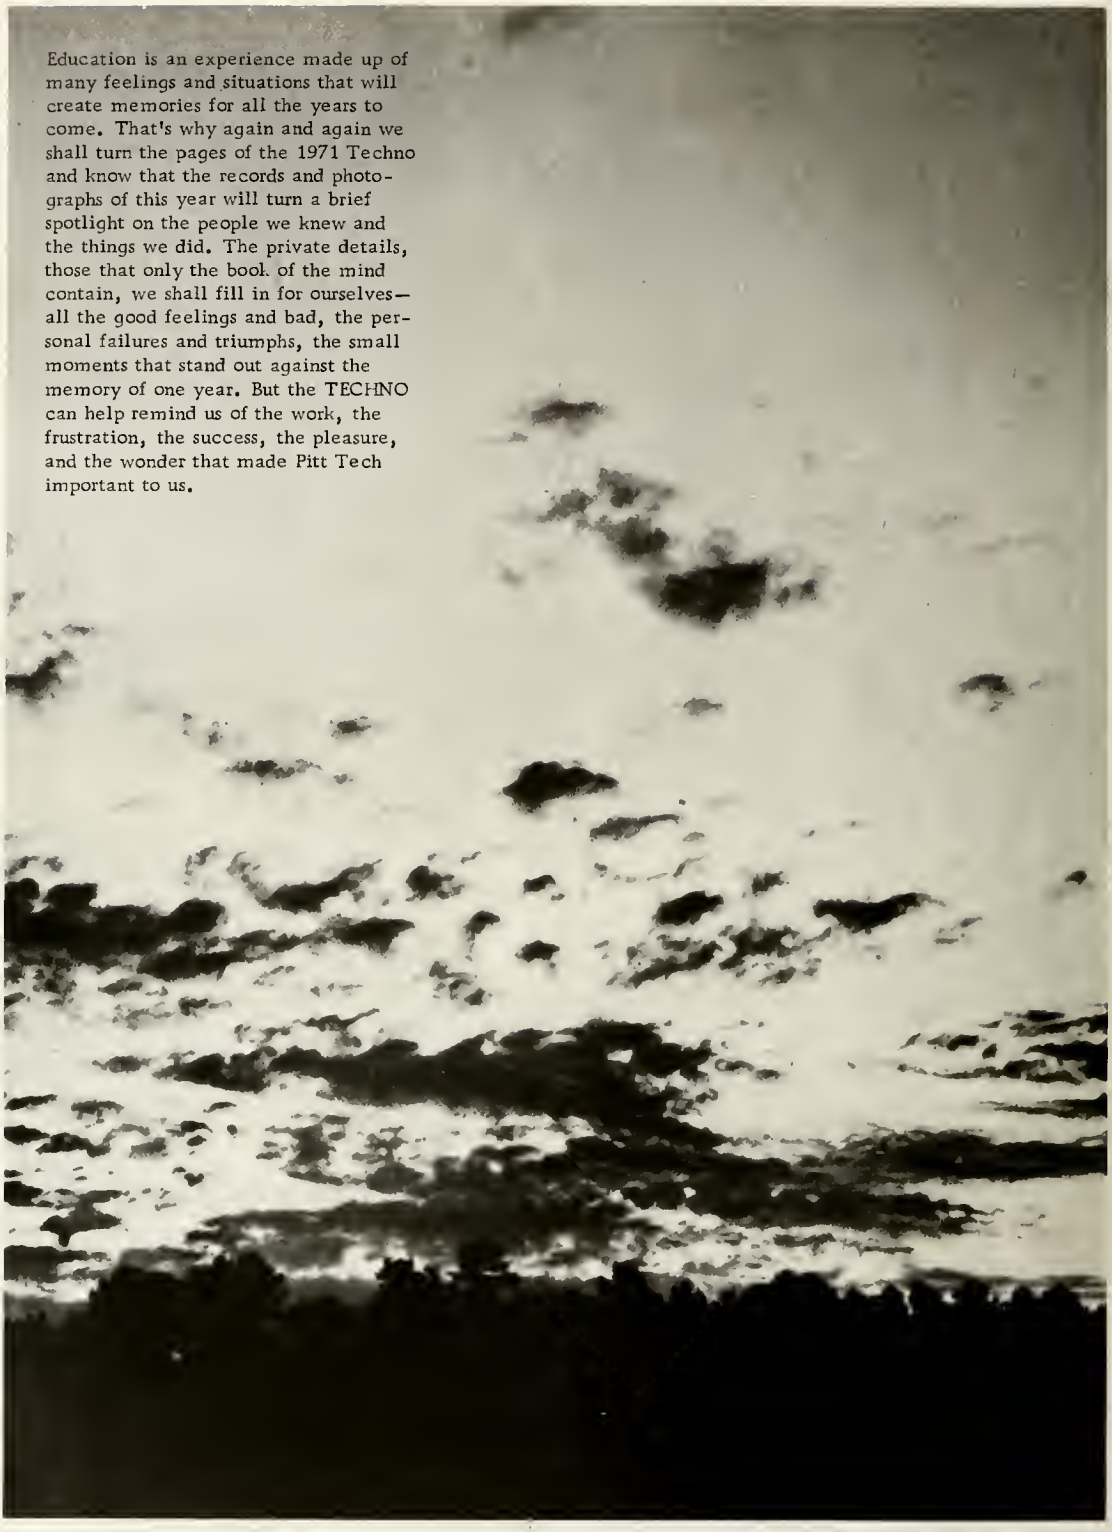
Education is an experience made up of many feelings and situations that will create memories for all the years to come. That's why again and again we shall turn the pages of the 1971 Techno and know that the records and photographs of this year will turn a brief spotlight on the people we knew and the things we did. The private details, those that only the book of the mind contain, we shall fill in for ourselves—all the good feelings and bad, the personal failures and triumphs, the small moments that stand out against the memory of one year. But the TECHNO can help remind us of the work, the frustration, the success, the pleasure, and the wonder that made Pitt Tech important to us.



IN MEMORIAM

The World Today

Our age seeks peace, but it breeds war. It holds human life to be sacred, but it slaughters men by the millions. It promotes generously well being, but it multiplies unscrupulously victims of distress and agony. It enhances the assets of the living, but destroys the heritage of the past. It proclaims justice, but it tolerates iniquities. It pays homage to eternal truths, but it desecrates their integrity with impunity.

Herein lies our dilemma: the discrepancy between our profession and our practice, the inconsistency between our faith and our works. One authority of preeminent greatness has said that faith without works is dead. It is this chasm between human desire and human performance which commands priority in our action. It transcends every other consideration in our time.

(Last words written by Dr. Robert Lee Humber on the day of his death, November 10, 1970).

. . . word time added by family.

Pitt Technical Institute

P. O. Drawer 7007
Highway 11, South
Greenville, North Carolina 27834
Telephone: 756-3130

FROM THE PRESIDENT:

An institution such as Pitt Technical Institute functions successfully as the result of the combined efforts of many people. We are fortunate here to have a judicious and dedicated Board of Trustees, whose counsel has set the pace of our progress. We are endowed with a very talented group of staff and faculty members who have given unselfishly of their abilities; and, above all other factors, we possess an energetic student body, characterized by a willingness to achieve and a desire to inspect new avenues of learning.

Pitt Tech has come a long way in its brief period of existence. It has brought to the area a greater understanding of the need for technical and vocational education, and it has fostered the realization of the dignity to be afforded the technician and craftsman in our complex society.

Eastern North Carolina stands on the threshold of a new social and economic era. It is my firm conviction that as the region further progresses from a totally agrarian to an agri-industrial area, it will be our alumni who will be leading the way and assuming the prominent roles in this transformation.

Pitt Technical Institute has enjoyed a very successful and noteworthy beginning in meeting the needs of Pitt County and the surrounding area, yet its greatest challenges lie ahead. As our society changes, we must maintain the flexibility necessary to change with it. As the needs and wants of our citizens make new demands upon us, we must possess the ingenuity and determination to meet these demands and satisfy these needs.

As President of Pitt Technical Institute, speaking for the Board of Trustees, the staff and faculty, I pledge to all our citizens that this Institution shall continually strive to remain the educational facility for and of the people, dedicated to the philosophy that excellence is the only measure of success and mediocrity is synonymous with failure.

Dr. William E. Fulford, Jr.
PRESIDENT

Mrs. Elizabeth Dudley
Secretary to the President

DEAN OF INSTRUCTION

The Dean provides leadership for professional staff and participates in development of academic policy and programs of the Institute. He advises on personnel matters; approves scheduling of courses; and recommends implementation of additional courses; coordinates academic advising efforts of Directors; participates in activities of Administrative Council (vice-chairman), faculty committees, such as Education Committee and General Faculty Committee; and participates in the development of budget in academic areas.

EXTENSION

The Director of Occupational Extension directs occupational extension service to provide extended day and night classes, summer session, and off-campus; arranges for building and classroom facilities, including laboratories and libraries, in areas where demand exists; formulates education programs to meet the needs of groups in a variety of subjects; and recruits teaching personnel to conduct courses.

Joseph E. Downing
Director of Extension

The Director of the Adult Education Center plans, develops, and administers programs to provide educational opportunities for adult students; cooperates with business, civic, and other organizations to develop non-credit courses to meet the needs and the interests of students and community; interviews and selects part-time teachers; and provides in-service training for teachers.

Ola L. Porter
Director
of Adult Education

LEARNING CENTER

Joy B. Sasser
Coordinator

The Learning Center is set up by the Department of Community Colleges for students who wish to learn on their own. Study areas include the following: Preparation for taking the high school equivalency test; preparation; upgrading in specific areas; and study of subjects for personal satisfaction.

Louise B. Downing
Coordinator

LIBRARY

A new, spacious library at Pitt Technical Institute features expanded shelving, more seating space, individual study carrels, carpeting and a general reading area. A continuously growing collection of materials includes all types of media—books, pamphlets, films, filmstrips, transparencies, slides, tapes, records, microfilm, periodicals, and newspapers that enrich and support all curriculum areas offered at Pitt Technical Institute. Open shelves for browsing and a quiet atmosphere are added features that are available to insure quality services.

DEDICATION

ROBERT M. TURNER

To a teacher who can be looked upon at all times for sound advice and encouragement; a friend who has devoted valuable time, limitless effort, and never-ending energy to the students and faculty of Pitt Tech; one who never refuses to help an individual, but does so with the sensitivity and awareness required; someone who possesses the rare and special qualities which make a person become a dedicated teacher.

As a coach, you have set a good example for us to live by as well as play by. You have helped the entire student body to appreciate the finest type of sportsmanship. To you Mr. Turner, not only as a Coach and teacher, but as a friend to all, we of the '71 TECHNO dedicate this annual to you.

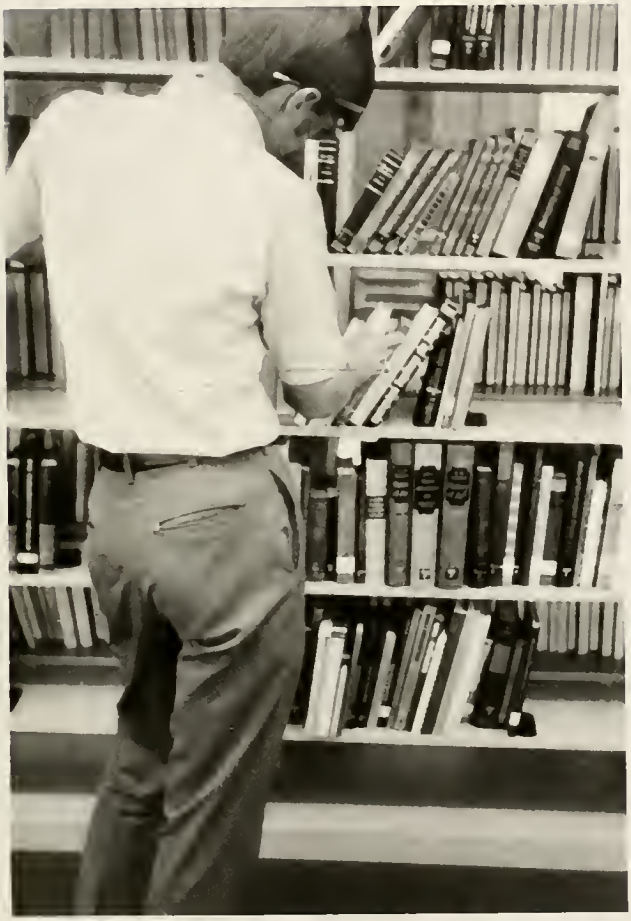
FIRST YEAR STUDENTS

VOCATIONAL



TECHNICAL

AGRICULTURAL BUSINESS

The Agricultural Business Curriculum is designed to help students acquire knowledge, understandings, and abilities in the broad field of agricultural business, including agricultural production. It combines knowledge of agriculture with business training to prepare the graduate for many of the varied employment opportunities in agriculture.

AGRICULTURE CHEMICALS

Agricultural Chemicals Technology is a modem science combining the basic principles and practical applications of both chemistry and agriculture. Industries served by this curriculum offer responsible positions in many agricultural and chemical areas requiring specialties for which training is not available to students of the four-year university. North Carolina is rapidly expanding with industries requiring persons qualified at the technical level. These technicians must be able to translate the modern technologies into practical applications. The ever-increasing and changing demand to halt the dangerous spread of pollution, and the demand to train personnel generally in the efficient use of otherwise dangerous materials are major factors in the increased demands for specialists in this vital industry.

ARCHIVES

ARCHITECTURAL DRAFTING

Architectural drafting technicians are concerned with turning the architect's design sketches into complete and accurate working plans and detailed drawings for construction purposes. They may prepare floor plans, elevation drawings, construction details, mechanical equipment layouts, door, window and room schedules, and site plans. The drafting technicians may be involved in work in areas such as engineering, building construction, specification writing, construction models, or architectural rendering.

COMMERCIAL ART

Surveys have shown an increase in the demand for graduates possessing training in the field of commercial art and advertising design. This curriculum will prepare a graduate with a sound, well-rounded background for technical and creative achievement throughout his professional life. Design and illustration for commerce are continually advancing their standards; therefore, the background offered the students must be well developed to prepare him for performance on a contemporary, professional level. Graduates of this program will have an adequate background in illustration, layout and lettering, design, and production enabling them to be employed in some facet of commercial artistry.

ELECTRONICS

The electronics technician may start in one or more of the following areas: research, design, development, production, maintenance or sales. He may be an assistant to an engineer, an engineering aide, laboratory technician, supervisor or equipment specialist. His training is similar to that of an engineer, but in less depth and in more practical application. He can function as a liaison between an engineer and the skilled craftsman.

MENTAL HEALTH

The specific tasks performed by the mental health associate will vary from one type of facility to another and according to personal skills and interests. The mental health associate who demonstrates skill in inter-personal relations may be assigned to work with patients and families to collect data, to interpret agency policies and procedures, to assist with implementation of the therapeutic plan, and to maintain liaison with other personnel and with other community agencies. Mental health associates may assist professional personnel in assimilating and maintaining records, in tabulating data, and in performing structured tasks of a clerical nature but requiring knowledge of psychiatric or psychological terminology.

POLICE SCIENCE

Today's law enforcement officer must be knowledgeable in many areas if he is to function effectively in our complex society. He is expected to handle matters dealing with human relations, often handled by those trained in the behavioral sciences. He frequently has to act in legal matters that require trained law personnel. He must be skilled in the most recent operational techniques in order to insure equality of justice to all.

To this end the Police Science Program is dedicated to the purpose of developing proficiency in both pre-service high school graduates and in-service law enforcement personnel. The development of this program is based on present and future educational needs. It offers theoretical and practical instruction to meet the requirements of various law enforcement agencies and provides the student with the skills, knowledge, and attitudes necessary for employment in the law enforcement profession.

ACCOUNTING

Accounting is one of the fastest growing employment fields in America today, and the job outlook for good accountants seems bright for many years to come. These opportunities are the result of the tremendous business and industrial expansion in all parts of the country. Because of this emphasis, there is a growing need for trained people in the area of accounting to help managers keep track of a firm's operation. The Accounting Curriculum is designed to fill this need by offering students the necessary accounting theories and skills for entry into the accounting profession.

The graduate of the Accounting Curriculum may qualify for various jobs in business and industry leading to any of the following accounting positions: accounting clerk, payroll clerk, accounting machine operator, auditor, and cost accountant. This training plus further experience should prepare the graduate to perform as office manager, accounting supervisor, and to fill other responsible positions in a business firm.

BUSINESS ADMINISTRATION

In North Carolina, the opportunities in business are increasing. With the increasing population and industrial development in this state, business has become more competitive and automated. Better opportunities in business will be filled by students with specialized education beyond the high school level. The Business Administration Curriculum is designed to prepare the student for employment in one of many occupations common to business. Training is aimed at preparing the student in many phases of administrative work that might be encountered in the average business.

SECRETARIAL SCIENCE

The Secretarial Science Curriculum is designed to offer the students the necessary secretarial skills in typing, dictation, transcription, and terminology for employment. The special training in secretarial subjects is supplemented by related courses in mathematics, accounting, business law, and personality development, to provide training in the accepted procedures required by the business world, and to enable a person to become proficient soon after accepting employment.

FIRST YEAR VOCATIONAL

AUTOMECHANICS

Complexity in automotive vehicles increases each year because of scientific discovery and new engineering. These changes are reflected not only in passenger vehicles, but also in trucks, buses, and a variety of gasoline-powered equipment. This curriculum provides a basis for the student to compare and adapt to new techniques for servicing and repair as vehicles are changed year by year.

Automobile mechanics maintain and repair mechanical, electrical, and body parts of passenger cars, trucks, and buses. In some communities and rural areas, they also may service tractors or marine engines and other gasoline-powered equipment. Mechanics inspect and test to determine the causes of faulty operation. They repair or replace defective parts to restore the vehicle or machine to proper operating condition. They use shop manuals and other technical publications.

ELECTRONIC SERVICING

Within recent years, improved electronic techniques have provided increased need for the electronic serviceman. These developments require expanded knowledge and skill of the individual who would qualify as a competent and up-to-date serviceman.

This curriculum provides a training program which will provide the basic knowledge and skills involved in the installation, maintenance, and servicing of electronic systems. A large portion of the time is spent in the laboratory verifying electronic principles and developing servicing techniques.

FARRIERING

Horseshoeing is an art that is in great demand today because of the rapid increase in the number of sports horses in the United States. There are more saddle horses in the United States today than in any other period in history. While the horse population is rapidly increasing, the number of qualified horseshoers is decreasing. The old masters of the trade are dying out.

The demand for trained people in all phases of specialized horseshoeing is great. The number of times an individual horse has to be shod in one given year adds to the demand for trained people in this area. The one area of specialized shoeing for race horses has a large demand for trained people, and when you add the other types of horses requiring special shoeing, the demand greatly increases.

PRACTICAL NURSE EDUCATION

Students are selected on the basis of demonstrated aptitude for nursing, as determined by pre-entrance tests, interviews with faculty members, high school record, character references and physical examination. Graduates of accredited programs of practical nurse education are eligible to write the licensing examination given by the North Carolina Board of Nursing. A passing score entitles the individual to receive a license and to use a legal title, "Licensed Practical Nurse."

The primary objective of the practical nurse education program is to prepare graduates to qualify for employment in an attractive, dignified career offering opportunity for rewarding service and increasing financial rewards.

MACHINIST

The machinist is a skilled metal worker who shapes metal parts by using machine tools and hand tools. His training and experience enable him to plan and carry through all the operations needed in turning out a machined product and to switch readily from one kind of product to another. A machinist is able to select the proper tools and material required for each job and to plan the cutting and finishing operations in their proper order so that he can complete the finishing work according to blueprint or written specifications. He makes standard shop computations relating to dimensions of work, tooling, feeds, and speeds of machining. He often uses precision measuring instruments such as micrometers and gauges to measure the accuracy of his work to thousandths of an inch.

MECHANICAL DRAFTING

This curriculum is designed to prepare students to enter the field of mechanical drafting. The first two quarters contain courses basic to all fields of drafting. The third and fourth quarters contain specialization and related courses that prepare one to enter mechanical drafting occupations.

Each course is prepared to enable an individual to advance rapidly in drafting proficiency upon entering the field of work. Courses are arranged in sequence to develop drafting skills and proficiency in mathematics and science. The draftsman associates with many levels of personnel—administrative, architects, engineers, skilled workmen—and must be able to communicate effectively with them. Courses to develop knowledge and skills in communication, human relations, economics and industrial organization are provided to assist the student in developing understanding and confidence in his relations with other persons.

BASKETBALL TEAM

THE FIRST YEAR

The year 1970-71 saw the arrival of Conference Basketball at Pitt Tech. The Eastern Carolina Community College Conference had it organizational meeting at Pitt Tech in the summer of 1970 and resulted in a fourteen team membership. The conference was split into a six team Northern Division and an eight team Southern Division in order to effect short on-the-road trips. Pitt Tech was aligned in the Northern Division.

From the very first game, the Pitt Tech Five let it be known they were the team to beat. Throughout the sixteen game schedule, the team showed determination and poise. Success and enjoyment became a by-product of hard work between games. When the season ended, future teams had a goal to shoot at, a pattern to follow, a trend to continue.

The first year has ended, the challenge has been met, Pitt Tech Basketball is ready for its second year.

Americans, wherever they may live, believe that a "man cannot leave a better legacy to the world than a well-educated family."

Education plays a predominant role in the American way of life. It advances free enterprise; it breeds desire in the individual to acquire new skills for self-improvement. Thus, education helps advance our way of life. And, as life broadens, so does the need for more education.

The Kinston "Dacron" Plant extends congratulations to the 1971 Graduates of Pitt Technical Institute upon the advancement of their education.
